

# The Solar System

The solar system consists of the Sun and all celestial objects that orbit it, including planets, moons, asteroids, comets, and dwarf planets. The inner rocky planets are Mercury, Venus, Earth, and Mars. The outer planets include the gas giants Jupiter and Saturn and the ice giants Uranus and Neptune. The Sun's gravity keeps these bodies in orbit. Moons orbit planets, and some planets have ring systems. The asteroid belt lies between Mars and Jupiter. Space exploration has provided detailed knowledge abo...
